

# MoaTime

## Group 8

Kim Jungho, Lee Jaeki, Noh Chaerin, Pyo Jeehyung, Kim Jaeyun, Lee Yeju, Lee Youngji, Kim Bomin, Park Chanyoung

**Objective:** Improve the group scheduling tool by addressing usability issues, enhancing the UI, and adding new features for better persistence and collaboration.

## Issues with the when2meet

### 1. Mouse Hover Dependency:

- You can only see the availability of others when you hover your mouse over a time slot.

### 2. Lack of Ranked Time Slots:

- No easy way to view the times ranked by the number of people available.

### 3. No User Persistence:

- If you lose the link, you cannot return to the schedule.
- 

## Enhancements.

### 1. Ranked Availability List:

- Provide a ranked list of time slots based on the number of people available.
- Users can quickly see the best times for group meetings.

### 2. Gradient Visualization:

- Introduce a gradient color scheme to visualize availability:
  - **Green** → High availability
  - **Red** → Low availability
- Intuitive visual representation of overlapping schedules.

### 3. **Notes & Comments for Time Slots:**

- Allow users to add notes or comments to specific time slots.
- Facilitates better communication and planning.

### 4. **User Authentication:**

- **Login System:** Save user data in database
- No more losing links!
